XM's weather and Traffic service is not yet available in my city, however I hope that it soon will be. Listening to FM radio, I sometimes wait over periods of 30 min. to hear the traffic. You can see how this can cause me to drive right up to accidents and delays. As a paying subscriber to XM service, I expect and anticipate this much need service. It is the same as local television channels being on Satellite. This may cause cable companies to loose some business, but it also gives consumers more of a choice, and if they want to pay the extra price for something, then their should be few if any limits on the programming. Thank You for listening,  
Thomas Monroe
